02 February 2021

ioneer's Rhyolite Ridge lithium-boron project in US poised to take advantage of global shift toward sustainable energy solutions

The company believes that diverse backgrounds, expertise, and extensive networks of two newly appointed members will significantly strengthen the depth and breadth of its board.

ioneer Ltd (ASX:INR) (OTCMKTS:GSCCF) (FRA:4G1) has appointed two US-based independent non-executive directors Rose McKinney-James and Margaret R. Walker to its board.

Rose McKinney-James is a Nevada-based expert in environmental business and technology policy, renewable and clean energy advocacy, and sustainable development.

Texas-based Margaret Walker is a chemical engineer with significant experience working across the chemical, engineering and construction sectors.

“Strengthen the depth and breadth of our Board“

ioneer executive chairman James Calaway said: “We are delighted to welcome Rose and Margaret to the iioneer Board, whose diverse backgrounds, expertise, and extensive networks in the United States will significantly strengthen the depth and breadth of our Board.

“Rose brings with her decades of experience in ESG and sustainability governance, advocacy and strategy, and is uniquely positioned to support iioneer as we grow to become the largest domestic supplier of lithium and an important voice in electrification in the United States.

“At Dow Chemical Co, Margaret worked across all aspects of the development and operations of the company’s facilities, leading engineering development and construction of Dow’s largest global operations, and this will greatly assist us as we move into the execution phase of Rhyolite Ridge.

“I know I speak for all of our board members when I say we think Rose and Margaret are the perfect complements to our Board’s skills, and adding their experience is timely indeed.”

McKinney-James is a Nevada-based expert in environmental business and technology policy, renewable and clean energy advocacy, and sustainable development.

Extensive search

Following the retirement of Pat Elliott, the board undertook an extensive search process for his successor.

The search provided the opportunity to broaden and strengthen the expertise of the board, reflecting the evolving needs of the company as it nears the construction phase of its Rhyolite Ridge Lithium-Boron Project, particularly about large-scale chemical plant construction and ESG experience.

These two critical areas of experience and commitment are expertly provided by these two outstanding new non-executive directors.
